

# Data Secure Platform

## Network level encryption

Visa Data Secure Platform (DSP) is a suite of products designed to help merchants prevent sensitive account holder data from being compromised.

- Visa DSP is made up of hardware and software point-to-point encryption (P2PE).
- This can help reduce PCI compliance costs by protecting data in flight and at rest.

### Potential Uses\*

Deliver a standardized network solution for securing payments across all participants

Combine P2PE and tokenization to minimize fraud

Your Payments. Universally Amplified.
